

**Ice White 16mm Danpalon was chosen to glaze over 500,000 SF of the new Super Jumbo AIRBUS 380 production facility in Toulouse France.**

With recent publicity surrounding the new Super Jumbo Airbus 380 airplane, including a tour of the United States, CPI is pleased to announce that 500,000 square feet of 16mm Ice White Danpalon panels were installed for the Airbus Production Facility in Toulouse, France which was created for this new aircraft. The Nano-Cell technology glazing provides quality diffused light to critical work areas.

Architects and Airport facility managers throughout the United States are also choosing CPI's translucent insulated polycarbonate standing seam glazing systems for a broad range of airport applications, including skylights, wall lights, entry canopies, curb-side drop-off canopies and walkway covers. You will find CPI translucent daylighting installations in many US Airports, including:
