Featured Project

Moanalua Shopping Center

CPI LiteBrow Canopies: *Suspended Light Transmitting Canopies*

The Moanalua Shopping Center in Honolulu, Hawaii, is nicely accented by CPI's LiteBrow Suspended Light Transmitting entry canopies. The canopies add an attractive finishing touch to the shopping center. They also provide shade without blocking natural light from entering the store.

The Architect, Design Partners Inc., was specifically looking for translucent material for the canopies and had specified a metal canopy until finding CPI's translucent Pentaglas 12mm tight cell technology standing seam glazing system.

"CPI's translucent entry canopies provide shade without blocking natural light".

The LiteBrow Canopy design is simple and classic and adds aesthetic appeal to any building. They can be specified for a new construction project or added to an existing building to create a more attractive entrance. They are provided in a variety of widths and lengths projecting from three to five feet wide and up to twenty four feet in length. This canopy system is made completely of aluminum, shipped fully assembled and easy to install. The lightweight canopies are suspended from the building, uninterrupted by columns or beams.

The Moanalua Shopping Center, designed by Duane Hamada of Design Partners, Inc., was a new construction project consisting of two buildings with a variety of stores and outdoor seating areas. Hamada included CPI's LiteBrow Canopies in order to add variety in shading and to highlight certain portions of the new shopping center.

CPI shipped 17 LiteBrow Canopies each five feet wide by seventeen feet long for the Moanalua Shopping Center. Hamada said he received positive feedback and that CPI's LiteBrow Suspended Light Transmitting Canopies are a great value in the translucent market.
